ADMINISTRATION REPORT

OF

IRRIGATION WORKS IN THE BOMBAY PRESIDENCY FOR 1914-1915.

I.—GENERAL.

A.—Details of Direct Expenditure.

In the year 1914-15 the direct expenditure (excluding collection charges) on all the Irrigation Works throughout the Presidency amounted to Rs. 96⅔ lákhs compared with Rs. 95¾ lákhs, in the previous year, and Rs. 83¾ lákhs, the average of the last three years. The total is classified and divided between the Presidency proper and Sind as follows :—

	Deccan and Gujarát.	Sind.	Total.
	Rs.	Rs.	Rs.
Works	44,25,462	8,03,095	52,28,557
Repairs	5,24,546	23,15,786	28,40,332
Establishment	9,35,813	7,77,645	17,13,458
Tools and Plant	—1,59,009	33,617	—1,25,392
Refunds of Revenue	21,977	.....	21,977
Gratuitous Relief	.....	.....	.....
Suspense Account	17,019	—28,683	—11,664
Receipts on Capital Accounts...	—2,368	.....	—2,368
Total	57,63,440	39,01,460	96,64,900

2. The distribution of the above expenditure under Major heads of Accounts is given below :—

Heads.	Rs.	Amount. Rs.	Remarks
Capital Account—			
Major Works—			
Protective Works	(a) 45,82,324		
Productive Works	3,54,027		
		49,36,351	Imperial.
Minor Works and Navigation—			
Works for which Capital and Revenue Accounts are kept ...	.....	46,787	Half Imperial and half Provincial.
Revenue Account—			
Major Works—			
Protective Works	3,00,652		
Productive Works	12,25,503		
		15,26,155	Do.
Minor Works and Navigation—			
Works for which Capital and Revenue Accounts are kept ...	5,31,686		
Works for which only Revenue Accounts are kept ...	13,11,022		
		18,42,708	Do.
Works for which neither Capital nor Revenue Accounts are kept—			
Agricultural Works	12,68,312		Do.
Contribution Works	25,948		Deposits contribution.
		12,94,260	
Construction of Protective Works	.....	18,639	Imperial.
Famine Relief Outlay on Irrigation Works	.....	.....	
Grand Total ...		96,64,900	

(a) Inclusive of expenditure in England, Rs. 1,99,637.

B.—Figures for Capital Works only.

3. The receipts on Capital Irrigation Works alone compared with the year's expenditure show a profit of Rs. 28,80,311 in Sind and a loss of Rs. 36,47,604 in the Deccan and Gujarát :—

Class of Works.		Direct Receipts.	Indirect Receipts.	Total Direct and Indirect Receipts.	Direct Expenditure. Capital.	Direct Expenditure. Working expenses (including the share of collection charges).	Direct Expenditure. Total.
		R.	Rs.	Rs.	Rs.	Rs.	Rs.
Major Irrigation ...	Deccan and Gujarát.	15,19,439	4,109	15,23,548	46,25,642	5,71,959	51,97,601
	Sind	1,67,677	27,00,052	28,67,729	3,54,027	11,58,434	15,12,461
Minor Irrigation—Works for which Capital and Revenue Accounts are kept.	Deccan and Gujarát.	1,91,936	5,331	1,97,267	1,733	1,69,085	1,70,818
	Sind	70,061	19,45,277	20,15,338	1,736	4,88,559	4,90,295
Total, Deccan and Gujarát ...		17,11,375	9,440	17,20,815	46,27,375	7,41,044	53,68,419
Total, Sind ...		2,37,738	46,45,329	48,83,067	3,55,763	16,46,993	20,02,756
Grand Total, Deccan and Gujarát and Sind, 1914-1915		19,49,113	46,54,769	66,03,882	49,83,138	23,88,037	73,71,175
Grand Total, average of last three years ...		17,51,480	41,31,716	58,83,196	33,14,285	23,83,283	56,97,568

4. The area under irrigation shows on the whole an increase of 12 per cent. on the average of the last three years, though there is small decrease in the Deccan and Gujarát. These areas and estimated value of the crops grown are contrasted in the following statement :—

Capital Works.	Area. 1914-15.	Area. Average of 3 years ending 1913-14.	Area. Difference.	Value. 1914-15.	Value. Average of 3 years ending 1913-14.	Value. Difference.
	Acres.	Acres.	Acres.	Rs.	Rs.	Rs.
Major Works—						
Deccan and Gujarát ...	129,704	142,210	−12,506	1,31,86,242	1,12,08,263	+19,77,979
Sind	1,402,387	1,176,385	+226,002	3,30,02,964	3,19,10,007	+10,92,957

Note.—For further details see Statements III-E and IV-E of Statistical part of Irrigation Administration Report.

C.—Figures for other than Capital Works.

5. These may be works for which only Revenue Accounts are kept, or works for which neither Capital nor Revenue Accounts are kept. The former are termed II Class Irrigation Works in the Presidency (excluding Sind). The receipts on these works are principally in the form of a share of the Land Revenue and are termed "Indirect" and as such are book credits, so that figures of revenue appearing in the Finance Accounts, as distinguished from the Statistical Statements accompanying the Irrigation Administration

Report, are very small, being for direct revenue only, *viz.*, proceeds from sale of water etc. The area of irrigation on these very numerous works is always large, but it fluctuates to some extent with the seasons. The following statements give a comparison of this year's and the average of the last three years' figures :—

Class of Works	Revenue.			Expenditure.	Net Revenue.
	Direct.	Indirect.	Total.		
MINOR WORKS.	Rs.	Rs.	R .	Rs.	Rs.
Works for which only Revenue Accounts are kept. Deccan and Gujarát.	20,006	5,40,312	5,60,318	3,99,354	1,60,964
Works for which only Revenue Accounts are kept. Sind	64,316	26,92,359	27,56,675	11,27,739	16,28,936
Total for 1914-15 ...	84,322	32,32,671	33,16,993	15,27,093	17,89,900

D.—REVIEW OF IRRIGATION.

Description of irrigation.

6. Irrigation in the Bombay Presidency is of several kinds. Well irrigation is similar in all parts of the country, but the canal irrigation in Sind is of quite a different nature from the canal and tank irrigation in the Presidency proper.

Sind.

7. In Sind the cultivation depends entirely upon irrigation; the country is flat, and the soil is mostly very fertile, but until it is brought under irrigation the land presents everywhere the appearance of a desert.

8. The canals depend for their supply on the floods or inundation of the river Indus; with few exceptions, they receive water from June to September only and their flow is very

variable. With a consistently low river the canals can get only very little water, while a fairly high and long-lasting inundation permits of the widespread cultivation of rich crops.

9. The good or bad fortune of a canal, however, depends also upon the position and behaviour of the river, whether scouring or depositing silt near its mouth. There is always an ample water supply in the Indus, but whether it can be utilized or not is a question of position and of levels. It is possible to make the supply secure by the construction of barrages at suitable places on the Indus. The proposed Sukkur barrage, for example, will, if constructed, head up the river water to the required level at all times of the year, and will therefore give an unfailing supply, both in the kharif and the rabi season, to the proposed large high level canals, from which irrigation by flow can then be practised over a much larger area than is now possible from the numerous inundation canals, both large and small, which are so liable to periodical failure. This scheme for a barrage at Sukkur is being placed again before the Government of India.

The remainder of the Presidency.

10. In the Presidency proper a very great deal of the cultivation is dependent upon rainfall only, and the tanks and canals therefore are useful for the purpose of growing more valuable crops or to counteract, when required, the evil effect of years of drought.

11. There are not many streams in the Deccan from which it is possible to obtain much water, except during the monsoon, hence the necessity for the construction of storage reservoirs.

12. All these irrigation works are generally both small and costly compared with those in Sind. The largest work proposed for the Presidency proper, the Nira Right Bank Canal, will discharge only 1,500 cusecs and the largest existing canal, the Hathmati, carries under 500 cusecs. In Sind there are 15 canals carrying between 1,000 and 10,000 cusecs.

Area and cost compared.

13. The area of irrigation in Sind is over 3½ million acres equal to about a quarter of the culturable area of the province, and the gross revenue is 86 lákhs of rupees, while the Capital expenditure up to date on irrigation works has been Rs. 321 lákhs.

14. In the Deccan and Gujarát the total area of irrigation is 300,000 acres only out of 27½ million acres classed as culturable, and the revenue from all sources is Rs. 23 lákhs. For these works the Capital cost up to date has been Rs. 550 lákhs. The gross return per acre is, therefore, much greater here than in Sind, but the return on capital expenditure in Sind is nearly 27 per cent. compared with less than 5 per cent. in the Presidency proper.

Large Protective Irrigation Works.

15. The construction of new Protective Irrigation Works in the Deccan is being pushed forward as quickly as possible. These are not supposed to yield an immediate profitable return on capital expenditure, but, as shown by the existing Nira Left Bank Canal, they are a great asset to the country in ordinary times, while in years of drought there is never any sign of famine in the regions which they protect.

16. The protective schemes now in hand are the Godávari Canals (nearly finished), the Pravara Canals and the Nira Right Bank Canal. The Gokák Canal extension project has been sanctioned, but it cannot yet be begun.

Good inundation and rainfall.

17. The high inundation of the Indus has been peculiarly favourable for irrigation in Sind generally, but it caused some disastrous floods in the Western Nara and the Karáchi Canals Districts.

18. In Gujarát too an excellent year of irrigation was experienced, as the rain and river supplies were mostly good; in the Deccan, however, the seasonable and plentiful rainfall resulted in a diminution in the area of irrigation; but on the whole the country had a prosperous year with excellent crops.

II.—SIND.

1.—Nature of Inundation and Rainfall.

Character of inundation.

19. The inundation of 1914 was an exceptionally good one. It may be regarded as a record year as regards height and duration of supply, though actually the highest gauge reading recorded during this year at Bukkur has been exceeded on two previous occasions, *viz.*, in 1882 and 1897. A record of the daily water levels has been maintained since the year 1848.

20. The Indus river commenced to rise about the middle of April and continuing with some fluctuations it reached the "fair irrigating level" of 13 feet on the Bukkur gauge on the 2nd July. This level, and more, was maintained for 45 days in July and August, compared with 16 days in the previous year, 31 days in the year before, and 39 days, the average of the previous 10 years.

21. On the Kotri Gauge, 260 miles downstream of Bukkur, the 'fair irrigating level' of 17 feet was first registered on 12th June, and this level and more was maintained from then, with only an interval of 14 days in June, till 2nd October, *i. e.*, for a total period of 100 days against 66 days in the previous year, 59 days in the year before, and 68 days, the average of the previous 10 years.

22. The highest gauge readings for the year were 17·4 feet on the 3rd August at Bukkur against a recorded maximum of 17·9 feet, and 23·8 feet on the 11th August at Kotri, which is 0·9 feet higher than the previous maximum.

23. The rainfall, which is not a matter of prime importance in Sind, was below the average. A few showers in the months of June, July and September, however, materially helped the kharif cultivation in certain areas. It amounted to 5·32″ as compared with 14·84″ in the previous year and an average of 6·20″ in the previous 10 years. Rainfall.

2.—Indus Right Bank Division.

(i) Works for which Capital and Revenue Accounts are kept.

24. Commencing from the Northern boundary of Sind the first work is the Desert Canal, which for many years has operated successfully. It irrigates lands in the Upper Sind Frontier District and Baluchistan. Consequent on heavy rainfall in the tract irrigated the demand for water was not great this year. The intense rainfall in the region of the hills and in the district also occasioned considerable damage by breaching the canal banks. The river erosion of last year continued and another 1,000 feet length at the head of the canal was washed away, but this has not affected the efficiency of the remainder, and the canal received a satisfactory supply of water. Desert Canal.

25. This is another successful canal, the efficiency of which is being threatened by erosion. A new Head Regulator has had to be built at mile 7/2 and is now in use. An excellent supply was maintained, a full flow being possible for 70 days. Though heavy erosion took place at intervals from June to October, no other serious damage occurred and all the crops were in good condition. Unharwah.

26. This is one of the largest and most important canals in Sind. It can irrigate over 300,000 acres of land (nearly 500 sq. miles) including an area in Khelat State. After a few years of bad failure in supply, causing much distress in the country west and south of Jacobabad, the water now entering the canal is abundant again due to the excavation of a very successful new mouth in 1912-13. Complaints of deficiency do occur, but these are from zamindárs holding lands on lengthy channels taking off from the canal between the 19th and 31st miles. This difficulty can be met by the construction of a new branch, which is under consideration. Begari Canal.

27. The first branch of this nature, called Choi, is now nearing completion. Others will be made; their purpose is to take water from the main canal at comparatively few points and by suitable alignment reduce the length of the smaller channels or distributaries. This important item of remodelling and the reduction in the size of sluices referred to in last year's report will combine to carry the water to a greater distance, and effect a more even distribution of the benefits of irrigation.

28. A breach occurred in the right bank of the Begari Canal at mile 5/4 between the old and new Head Regulators. Also the lower part of the canal ran some risk from the run-off of the hill torrents, which breached the tail branches called the Idanwah and Sirwah in places, but there was no serious interruption of supply.

29. The Mahiwah is a useful canal on the left bank of the Indus, north of Rohri. It received a very satisfactory supply of water throughout the season. The Mahiwah will not be completed until the Mirkosh branch is constructed. Revised plans and estimates for it are under preparation. Mahiwah.

30. This is on the right bank north of Sukkur, and flows for a longer time than most canals in Sind. It has two heads of which the Rahuja is the higher and better, and is situated due north of Sukkur. When the river abandons this, as it did in August, the old one near the Sukkur bridge has to be resorted to. The canal carried water till 20th of March 1915. Sukkur Canal.

31. Though classified under Minor Works, the Ghar is the largest canal on the right bank of the Indus. It irrigates over 350,000 acres, and its efficiency is secured by the possession of several mouths or feeders. Of these the Fordwah, as usual, gave a very good supply. An additional cut, 5,800 feet long, called the 1913-14 feeder, was made from the river, and this also proved a success. As a protection against silting in the bed of the canal and the consequent scouring of the sides, groynes were constructed and proved effective. Ghar Canal.

32. This is in the extreme south of Sind and on the left bank of the Indus. It is a small and useful canal, which does not yet reach its full area of cultivation owing to wastage of water in the upper reaches. The size of the sluices in the first 12 miles will be gradually reduced to remedy this defect. Sattah Canal.

(ii) Works for which only Revenue Accounts are kept.

33. The principal canals under this head are the Sind, to the north of Sukkur, the Western Nára, south of Lárkána, and Pinyari, Kalri and Baghar, south of Jherruck. Of these the Pinyari is the only one on the left bank of the Indus.

Sind Canal.

34. The old channel named after Colonel Fife was re-opened on 15th July as a new mouth. The new Head Regulator over this channel at the Adurtakio Loop of 1912 was completed; the result has been most satisfactory and most of the lands hitherto irrigated by lift were brought under flow water.

Western Nára.

35. This system irrigates an area nearly as large as the Ghar Canal, *viz.*, 350,000 acres. In addition to the usual supply at its head the Western Nára receives water at the 95th mile from the Pritchardwah, and for this feeder in turn it was this year found necessary to make a new cut from the river near Channa village. The cut is 5 miles long, and crosses the now ineffective cut of 1912 near its tail. It is in soft material and had to be protected from scour by groynes; the whole cost was Rs. 1,34,000 and the cut has proved a great success.

36. Between the 70th and 80th mile of the canal there is a narrow portion with low banks throttling the discharge. Two serious breaches occurred in Mehar Sub-division which took 5 days and 10 days to close, but in spite of the regulation of supply, which in consequence of the danger of breaching was imperative, the cultivation was excellent.

37. Besides the required improvements indicated last year but not yet carried out, *viz.*, a new feeder, cutting off bends and improvements to branch channels, it is important to arrange for the diversion of the Gaj Nai, a hill torrent, which comes down in sudden huge spates causing damage in the Kakar and Johi Tálukas.

Pinyari Canal.

38. This important canal, 67 miles in length and irrigating 100,000 acres, is the chief source of supply of the Shah Bunder Sub-division of the Karáchi District on the left bank of the Indus. The canal with all its branches has worked very satisfactorily and produced excellent crops.

Kalri Canal.

39. The Kalri canal takes off from the river on the right bank near Luka and runs south-west through Tatta Táluka and into Mirpur Sakro Táluka.

Until the occurrence of the breach in the Panah-Baghar Bund in July, the cultivation in the above tálukas was in a flourishing condition. The improvements required for this small canal are still under consideration.

Baghar Canal.

40. This is the southernmost canal on the right bank. It was originally a mouth of the Indus, and is a large straggling untidy channel with no head regulator, so that when the river is in high flood the canal banks are in danger of breaching. The past year proved unfortunately a disastrous year for the greater part of the Baghar tract. Many small breaches occurred in its embankments and were successfully closed, but a large breach on the left bank in Baphi Gharko and a breach in the Thahimani loop of the Baghar Uchito Bund destroyed the greater part of the cultivation on the Baghar and its branches. In addition to the destruction of crops very extensive damage was done to the branches of the Baghar Canal and the repairs will cost a large sum of money. Experience has now proved that regulation is necessary and a project for the construction of a Head Regulator is under preparation.

Unfinished Works.

41. The following are the principal original works under this head, *i.e.*, works for which only Revenue Accounts are kept, which were either commenced during the previous year or during the year under report, and were in progress :—

	Expenditure during 1914-15.
	Rs.
(1) Improvements to Dhamrao Canal *ex* Western Nára ...	8,671
(2) Converting a Road Bridge across Baghdadwah into a Head Regulator	1,358
(3) Constructing a Head Regulator over the Sadabahar Canal at its head	1,882
(4) Constructing an Escape sluice in the right bank of Sadabahar Canal opposite the Phusni sluice	2,565
(5) Providing an Escape sluice in the Baghar Right Bank to drain Kalankot Dhand	1,461

Openings under the Railway.

42. In the Shikárpur Canals District the bridge under the North Western Railway, through which the Garkanowah used to flow, was closed about the year 1906-07 by the Railway, and zamindárs dependent on it suffered much from deficiency of water-supply. A new cut has therefore been constructed this year to feed the Garkanowah. The Railway have made a new culvert in their bank and have also constructed a diversion bund in which the Head Regulator for the canal was built by the Public Works Department.

Karia heads.

43. The policy of doing away with unnecessary karia heads and getting permanent sluices of correct size built wherever possible was steadily and systematically pursued on all canals throughout the year.

3.—Indus Left Bank Division.

(1) Works for which Capital and Revenue Accounts are kept.

44. While all the canals in the Right Bank Division take off directly from the Indus River, those in the Left Bank Division fall under two heads, *viz.* :—

(*a*) The canals taking off from the Eastern Nára.

(*b*) The canals taking off directly from the Indus.

45. Under (*a*) are the Nára River, the Jámráo, Mithráo, Khipro, Thar and Hiral Canals, of which the Khipro flows during the inundation only, the rest being perennial. The Thar, though classed as perennial, is closed on or about the 1st December each year to save the country round about from being water-logged.

46. Under (*b*) are the Dád, Nasrat, Fuleli, Hasanali and a large number of smaller canals, all being classed as inundation canals though the Fuleli receives a fair rabi supply.

(a) Canals taking off from the Eastern Nára.

Nára Supply Channel.

47. This is an artificial channel 12 miles in length taking off the river on the left bank above Rohri, and forming the mouth or feeder to the Nára river, an ancient course of the Indus. It possesses a head regulator at 4,000 feet distance from the river, which is used to close off the river supply in times of heavy floods and to prevent silting. This is especially necessary when the floods from Ghotki in the north spread over the country and flow into the Nára beyond the 12th mile.

48. The Ghotki floods occur only when the set of the Indus is strongly on the left bank in that part of its course.

49. The Head Regulator was closed from 3rd to 15th August as floods from Ghotki computed at 65,000 cusecs entered the Nára. The project for excluding these floods by means of a protective bund has been sanctioned by the Government of India, and work will be commenced in the coming cold weather. Heavy silting occurred at the mouth of the channel, when the Regulator was closed and trees etc. were swept in as far as the Regulator from an erosion of the river bank 6 miles upstream. After continuous day and night work extending over a month and a half this obstruction was cleared away. Subsequently a favourable change in the river current scoured away all the silt above the Head Regulator, so the rabi supply to the canals dependent on the Nára was not interfered with.

The Nára.

50. The Nára river is a natural channel running for 96 miles to the Jámráo head works and 100 miles on to the Thar weir. There is a training bund near the Jámráo weir, and from there onwards, so as to confine the floods more or less to the channel. The Nára commands over 500,000 acres of culturable land, but only about 37,000 acres are usually cultivated.

Jámráo Canal.

51. This is the first and most important canal taking off from the Nára river. The command is roughly 800,000 acres, and an area of 300,000 acres could certainly be irrigated annually, if an unfailing perennial supply of water could be assured. The rabi suppy is, as already explained, dependent upon the condition of the Nára supply channel, which may suffer from silting. Recently the rabi supply has been good and the area of irrigation has now risen to 253,000 acres. Cotton is the favourite kharif crop covering 140,000 acres or 80 per cent. of the kharif area.

52. The condition of the river approaches at the head of the Jámráo and of the canal itself is very satisfactory. The remodelling commenced in 1911 is now practically completed.

Mithrao Canal.

53. The only other important canal of this system is the Mithrao, which commands 400,000 acres. The irrigation was 33 per cent. of the command, a little over the average.

54. The new 30th and 45th mile Mithrao Right and Left Bank Distributaries are now under construction. They will add to the area of irrigation and revenue, and similar schemes will follow when these are completed.

Khipro, Hiral and Thar Canals.

55. These small canals only command about 220,000 acres, and the area irrigated was about one-third of the command.

56. The Khipro is the least efficient, but a new head is being built for it which will ensure a more regular supply.

(b) Canals taking off direct from the Indus.

Nasrat and Dad Canals.

57. These are two very important systems, commanding together a culturable area, in the Hyderabad and Nawábsháh districts, of 728,000 acres. Like most other large inundation canals in Sind they have more than one mouth and their prosperity or otherwise depends upon the efficiency of these mouths. The river may leave a mouth, or may fill it up with silt, and the supply of water will be diminished or fail; but if the river is favourable the canal will give excellent irrigation producing bumper crops.

58. Both the Dad and Nasrat have experienced bad years, but they are now fortunately doing well, especially the former on which, though some damage occurred to the kharif crops by flooding, the rabi wheat is reported to have been a fine and extensive crop. The cut of 1912-13 leading into the Bhorti Dhand was very successful this year and has been preserved in equally good condition for the coming year.

59. In the case of the Nasrat the river was more unstable. The Lukhman Gharo Cut of 1912-13 was at first useful, but rapid erosion and a change of course subsequently brought the river supply direct into the Lundi Dhand and the former cut became inoperative. Fortunately, however, the supply was not interrupted and so both the canals had a prosperous year irrigating more than the average area.

Fuleli Canal.

60. The largest of all the Sind Canals is the Fuleli, whose head is near Hyderabad. It has the advantage of an excellent supply of water all the year round and commands 1½ million acres of culturable land. The silt bank which had formed at the mouth of the canal in 1912 has now entirely disappeared and no further trouble is anticipated. Erosion inside the canal is being successfully combated, as on the Ghar, Jámráo and other canals, by groynes. The replacing of the antiquated needle type of head regulator by groups of horizontal gates has had to be postponed on account of the war. Special attention is being paid to the gradual improvements of the branches and distributaries on this canal, and the possibility of fostering rabi irrigation, so as to utilise some of the large amount of water which flows to waste every year at the tail escape of this canal, in the rabi season.

61. The area cultivated during the year was about 390,000 acres which is about the average figure.

Hassanali Canal and other Canals

62. The Hassanali Canal is on the left bank about 20 miles south of Hyderabad. The length from the river bank to the head regulator was so seriously silted that the supply was threatened. Fortunately the strenuous efforts made to clear the channel were rewarded with success, and an area of 18,000 acres, a little more than the average, was brought under irrigation.

63. On the numerous other canals in the Hyderabad district a good deal of damage was done to the kharif crops by abnormally high floods resulting in a reduction of the area of crops brought to maturity, but the crops were of excellent quality.

64. The Ren Distributary system came into operation this year and worked well. It is found that the irrigable area will not be quite as much as originally anticipated as some of the land is not suitable for cultivation but the channel is a very useful one.

Great Marak.

65. The Great Marak like many other inundation canals has no head regulator. In recent years the river has risen higher than usual and this has caused breaches. The annual damage done in this manner has been about Rs. 12,000 for the last three years.

(ii) Works for which only Revenue Accounts are kept.

66. The principal canals under this head are the Naulakhi, the Mehrabwah, the Gharo Mahmudo and the Kari Shumali. These canals had good crops.

67. The Naulakhi supply failed somewhat in August, when part of a protective bund was washed away by the river. Then the progress of erosion reached the vicinity of a bend in the second mile of the Naulakhi Canal and a new inland Chord channel had to be excavated between mile 1 and 3. This channel is now in working order.

68. The Mehrabwah is generally looked upon as a most unsatisfactory canal, but it did well last year and has again had an excellent season.

69. The new cut to feed the tail of the Gharo Mahmudo from mile 3 of the Sangrowah, which was excavated last year, proved very satisfactory.

4.—Protective Embankments.

70. The purpose of the long lines of protective embankment found in Sind is to prevent the flood waters of the Indus from spreading over and devastating the country. In certain cases, the flooding of the country is beneficial, but it must for this purpose be kept under suitable control, as in the case of basin irrigation in Egypt, or the lowlying land must be of limited extent, as on the banks of Deccan streams. In Sind when the Indus overflows its banks it pours over a vast area of lowlying country on both sides and spreads until all the moisture is absorbed.

71. The permanent security of cultivation cannot be assured without protective bunds; these are therefore the most important works in Sind and one of the most arduous and responsible tasks of the Engineers is to keep them in perfect repair, and to replace in good time by fresh embankments, called loops, all those portions which seem to be threatened with destruction by the erosion of the river.

72. Starting from the northern boundary of Sind on the right bank the Kashmor bund extends to the Begari canal. It was not subjected to serious erosion this year. The Sukkur Begari bund next to it had two small breaches, and some leaks, which involved the necessity of calling up zamindári labour for help. On the left bank north of Rohri the bunds are smaller and of less importance. There were five breaches in the Naich bund and three in the Kasimpur bund. No particular damage resulted.

73. South of Sukkur on the left bank the Western Nára bund breached at mile 39/2 and mile 72/1 and considerable damage resulted. The extension of this bund from mile 69/1 to mile 80/6 was in progress and it has now been decided to continue it from mile 80/6 up to Sehwan.

74. The Manjhand bund which is further south was raised and strengthened in its first three miles, but a bad breach of 700 yards width occurred near its tail, and the villages of Lakha, Kachi and Khuman and the North Western Railway were saved only by making other cuts to let out the water.

75. The Mikaro and Tirchi bunds on the left bank in the Nasrat Canals District were severely tested with 10 feet and 5 feet of water against them respectively but they stood well. Owing to the flood level being higher than any previously recorded, the Ghalian bund between the old and new Fuleli mouths was overtopped and breached at several places, and the kharif crops here were a complete failure. This bund has now been raised to 2 feet above this new high flood level.

76. The Jamshora bund south of the Fuleli was only saved by most unremitting attention and effort. It has also been raised now. A failure here would have meant flooding the whole land up to the railway bank and bey nd it to the south of Hyderabad. The Gidu bund opposite Kotri was partially washed away and had to be remade inland. Further south the Hajipur bund on the left bank stood well. In the Karáchi District there are lengths of 51 miles of bund on the right bank and 94 miles on the left bank. Large breaches occurred in July 1914 in the Panah Baghar and Baghar Uchito bunds. The very large floods passing through these reduced the flood level in the river, and thus saved the left bank bunds from damage. The raising and strengthening of all the Karáchi District bunds has been completed.

77. It will be seen from the above that this was a year of most strenuous work for the men in charge of the river bunds, the inundation having risen to an unprecedented height; the Government of Bombay have expressed their appreciation of the work done by all concerned.

5.—Indus River Commission.

78. The works executed during the year were charged to "43—Irrigation Minor Works and Navigation—Agricultural Works—Works for which neither Capital nor Revenue Accounts are kept". All surveys carried out under the supervision of the Chief Engineer, Indus River Commission, are classed under this head. Indus River Commission Works and their Classification.

79. During the year the usual topographical surveys of the Indus, dhands and bunds, etc., were made and aggregated 2,409 miles in length. Survey of the Indus.

80. As was done in the previous three years, the whole course of the River Indus from Rojhan in the Punjab down to the bifurcation, a clear length of 535 miles, also 37 miles of the Haideri and 63 miles of the Ochito were surveyed and plotted.

81. In addition to this, surveys of the Gudu Dhand and its feeders and the "Central passage of the Indus" were carried out and cross sections of the river were taken at Jherruck, Belo and just above the bifurcation and of Haideri and Ochito below the bifurcation.

82. The Khairpur Boundary Rails, 84 in number, were all inspected. A new rail and pointer were fixed on range line 30 on the left bank, as the original ones had been eroded by the river. Rails with their pointers on the range lines Nos. 31, 32, 33, 34 and 35 on the left bank were shifted and refixed further inland, as they were in danger of being eroded. Their distances from the midstream fixings have been noted. A few range lines were measured and the distances from the rails to the midstream fixings were checked. Khairpur Boundary Rails.

83. Gauge readings of the river were taken during the year daily at 10 stations, twice a week at 4 stations, and weekly at 9 stations. River Gauges.

84. Observations were also made on the velocity at various depths, on sand waves or the movements of the bed of the river and on the silt in suspension, and the discharges were regularly measured. The results will be published in the Indus River Records. The principal figures of the discharges at Sukkur during the inundation and the minimum discharge of the year, compared with the results of previous years, are as follows:— Scientific Work and discharges of the Indus.

Month.	1910-11.	1911-12	1912-13.	1913-14.	1914-15.
	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.
June	10,491,000	13,325,000	8,138,000	8,432,000	7,401,000
July	14,037,000	11,725,000	16,227,000	10,586,000	21,453,000
August	17,340,000	10,916,000	17,275,000	13,377,000	18,359,000
September	10,699,000	9,050,000	7,034,000	7,670,000	13,863,000
Total* ...	52,567 000	45,016,000	48,674,000	40,065.000	61,076,000
Average discharge ... Cusecs.	430,902	368,984	398,967	328,402	500 623
Maximum discharge ... Cusecs.	700,440	582,742	721,256	621,156	948,728
Minimum discharge, June to September ... Cusecs.	196,829	211,089	105 230	108,513	176,894
Minimum discharge observed throughout the year . Cusecs.	32,448	35,311	23,730	23,719	40,664

* *Note*—These totals and their constituent figures are the sums of the daily observations of the Indus in cusecs. To arrive at its total discharge during the period concerned, the figures given in the table must be multiplied by 86,400 (the number of seconds in a day).

85. The observations at Dera Gazi Khan during the cold weather were discontinued this year and in their place observations at Mithankot, above and below the junction of the Chenab with the Indus, were instituted. The latter observations will in future be continued. As the Mithankot discharges were measured from the middle of January to the end of March, a short period only, they are not given in this report.

Extensions and improvements and Special repairs.

86. The estimated cost of the works under these heads sanctioned during 1914-15 by the Indus River Commission for execution by Executive Engineers and by the Commission is given below :—

A.—Indus Right Bank Division.

District.	Extensions and Improvements.	Special Repairs.	Total.
	Rs.	Rs.	Rs.
Begari Canals	18,640	2,107	20,747
Shikárpur Canals	5,564	3,727	9,291
Western Nára	28,253	1,786	30,039
Karáchi Canals	56,462	...	56,462
Total ...	1,08,919	7,620	1,16,539
B.—Indus Left Bank Division.			
Nasrat Canals	...	7,205	7,205
Fuleli Canals	...	1,853	1,853
Total ...	...	9,058	9,058
C.—Indus River Commission.			
Works under the direct control of the Indus River Commission	63	...	63
Grand Total ...	1,08,982	16,678	1,25,660

Maintenance and Repairs

87. The total expenditure under this head on the several works under the direct control of the Indus River Commission was Rs. 38,721, of which Rs. 2,182 were spent on the River Gauge Establishment at Sukkur, Kotri, Jherruck, Khairabad (Punjab) and the Indus Delta.

Total expenditure.

88. The total expenditure incurred and accounted for by the Indus River Commission was :—

	Rs.
Works	940
Repairs	38,721
Establishment	95,408
Tools and Plant	2,390
Total ...	1,37,459

Snagging Operations.

89. The snagging tour on the Indus lasted from 10th to 27th January 1915 and extended from Kotri to Keti Bunder. This important work consists of the removal of snags and trees washed down by the river, causing obstruction to navigation in the main channels. Snagging was also carried out in the Eastern Nára from 6th February to 15th March 1915.

Erosion.

90. Heavy erosion occurred at mile 5/0 of the Kashmor Bund and at miles 9/4 and 21/1 of the Sukkur Begari Bund; the maximum rate of the erosion being 1,180 feet, 700 feet and 900 feet per week respectively.

Dredger 'Mudlark'.

91 No clearance work was done this year by the dredger "Mudlark". Certain gear required to increase the efficiency of the dredge has been arranged for in England, but owing to heavy pressure of work entailed on the firms at Home on account of the war, it will not be ready for some time. On arrival it will be fitted to the dredge at Kotri.

Sukkur Barrage.

92. Further investigations were made in connection with the question as to the effect which the increased irrigation in the Punjab is having upon the River supply at Sukkur.

93. Surveys were also made for the selection of a new barrage site below the Sukkur Gorge, and lines for the Left and Right Bank Canals to lead from this site to join the original canal alignments. These surveys proved satisfactory, and at a meeting at Sukkur of Bombay Irrigation Engineers with the Inspector General of Irrigation it was unanimously decided that the preparation of new plans and estimates should be strongly recommended for a barrage below the Sukkur Gorge and for a canal on each bank. The Government of India have been addressed accordingly.

6.—Miscellaneous.

Plantations

94. The nurseries and gardens are all in good condition.

95. The existing plantations on canals and bunds were well cared for. New trees were planted in all the Districts in the Indus Left Bank Division on various canals and bunds and they are all thriving.

96. Efforts are being made to increase the plantations in the Right Bank D vision except in the Ghar Canals District. The poor state of these in the Ghar Canals District is no doubt due to the poor quality of the soil and the want of wells in the compounds of the Inspection Bungalows. This matter is receiving the special attention of the Executive Engineer.

97. Cotton is grown only on the left bank of the Indus. No Egyptian cotton was grown. The number of waterings given to indigenous cotton was 7 for lift lands and 6 for flow lands in the Nasrat Canals District. The interval between waterings on lift lands was from 10 to 15 days and in case of flow lands 15 to 27 days, and the waterings continued till 26th September. Irrigation of Cotton Crops.

98. On other inundation canals the number of waterings were from 3 to 10 times ending with August or October.

99. In the Jámráo Canal District the number of waterings given varied from 6 to 11 for lift lands and from 5 to 12 for flow land and the last waterings were between 12th September and 5th December.

III.—DECCAN AND GUJARAT.

1.—Northern Division.

100. Irrigation in the Northern Division is done mainly by means of small tanks or reservoirs dependent on local rainfall, but there is one large canal system in the Ahmedabad District.

101. In the year 1914-15 the rainfall was extraordinarily heavy in Ahmedabad, *viz.* 40 inches against an average of 29 inches. In other parts the rainfall was sufficient.

(i) First Class Irrigation Works.

102. These canals provide water for lands in Ahmedabad and Kaira. The Hathamat Canal is fed by the river of the same name. Besides irrigating lands immediately under its command, the canal supplies water to the Bokh reservoir for storage, and also to the Bhujwa channel which flows into the Khari river, thus feeding the Khari Cut Canal and Khari sluices in an area of ancient irrigation. There are some small tanks in this area too but the principal one dependent on the Khari Cut is the Chandola. The Hathmati Canal and the Khari System.

103. The Hathmati had an excellent flow lasting from June to the end of March. The Bokh reservoir was filled once and the small Chandola tank was filled nearly three times during the season. As a consequence of this good supply and the excellent management of the officer in charge of Gujarát Irrigation, even the last year's figures were beaten and 21,500 acres were irrigated yielding a gross revenue of Rs. 1,13,000. This return is more than double the average. The principal crop is rice, about 16,000 acres, and there are 3,000 acres of pulses.

104. The Khari Cut extension project was completed and will be useful in years of good supply.

105. The Tranja-Nagrama tanks can usually only get a very poor supply as they depend upon a feeder channel having no catchment of their own. This year no water came to them. But the Wangróli, Savli and Saiat tanks all filled and irrigated 3,500 acres with Rs. 14,000 gross revenue compared with less than 900 acres last year. Tanks in Kaira.

106. The special repairs necessitated by last year's breaching of these tanks have been satisfactorily completed.

107. This is a work in Dohad Táluka of the Panch Maháls which was commenced for the purpose of famine relief in 1912. It has now been completed. Futelao Tank.

(ii) Second Class Irrigation Works and Agricultural Works.

108. The flood in the Khari River on the 10th July 1914, reached 10 feet at the Ráipur Weir and it damaged the old wooden structure washing away six of the gates. Temporary repairs were very promptly made with masonry and rails and needles in a 60 feet length and water was successfully headed up for the Khari Cut. Khari Sluices

109. This heavy flood also caused a breach in the protective bund at Lali and the water flowing into the Goblaj tank filled it to above waste weir level. The Bherai reservoir and all the other tanks were filled, and subsequently water was also given for the irrigation of the rice crop in the Kalambandhi villages, though the transplantation was late for want of labour.

110. This small work was built about 14 years ago and is classed as an agricultural work. It is near Dohad and has two canals ; it irrigated about its average area, 390 acres, as the tank did not fill. The gross revenue was under Rs. 1,000 and cost of maintenance Rs. 3,500 which is a somewhat disappointing result. Muvalia Tank.

111. There are numerous small tanks in Gujarát, of which a portion are attended to every year, so as to maintain their irrigating efficiency. Improvements to 116 and repairs to 71 such tanks were undertaken this year. Improvements to 1 and repairs to 15 Talukdári tanks were also carried out. Old Tanks and Drainage Channels.

112. Drainage channels and reclamation works were kept in working order

2.—Central Division.

113. Since the formation of the Deccan Irrigation Division referred to in the Administration Report of last year, the Central Division contains only a few irrigation works of importance.

(i) First Class Irrigation Works.

114. The tanks of the Sholápur District—Ekruk, Ashti, Pathri, etc., and their canal systems constitute the most important of the irrigation works remaining therein. The Ekruk tank, which was constructed for irrigation purposes exclusively, has for many years furnished the town of Sholápur with large supplies of water for industrial and domestic needs.

115. An important work is now in progress at Sholápur for improving the water supply of the town. For years it has drawn its supply from an open channel fed from the Ekruk Tank; but this unsatisfactory arrangement is shortly to be replaced by a scheme for drawing the water direct from the tank through cast iron mains. The project includes the installation of more powerful pumping machinery and additions to the existing service reservoir in the city. This work is progressing satisfactorily. The engine house is completed and the rising main to the new reservoir has been laid.

116. The project for enlarging the catchment area of the Ekruk Tank referred to in paragraph 76 of the last report has been held in abeyance for want of funds till other more urgent projects are disposed of.

117. The area irrigated on First Class Works was 13,000 acres, being less than the average, because of the favourable rainfall. The assessed revenue Rs. 1,45,000 was also below the average.

(ii) Second Class Irrigation Works.

118. The expenditure on extensions and improvements and maintenance and repairs to the bandharas situated in the West and East Khándesh Districts was Rs. 15,073.

3.—Deccan Irrigation Division.

(i) First Class Irrigation Works.

119. This Division includes all the irrigation works constructed or under construction as a protection against famine, also the Mutha Canal system, which is classed as a Productive work, and three small tanks in the Poona District. The works in existence will be first referred to and then a somewhat detailed account will be given of the large and important projects on the construction of which over 40 lákhs of rupees a year are now being spent.

(a) Works in existence.

Protective Works.

Nira Left Bank Canal.

120. Of the works in being, this is the largest in the Deccan and is situated in the Poona District. A comparison between the busy agricultural operations on the left bank of the Nira Valley and its 50,000 acres of rich irrigated crops and the dry cultivation on the right bank demonstrates in a most convincing manner the value of perennial irrigation. The trouble experienced with waterlogging and salt efflorescence is a small matter when contrasted with the benefits obtained, but the evils of over-irrigation and careless use of water, which are some of the principal causes of this damage are being combated, and certain rules have been framed by which the wastage will be reduced and the cultivation will at the same time be improved. Sugarcane occupies close upon one-fifth of the area irrigated. It is a most profitable crop to the owner and yields a good revenue to Government. It forms the cherished possession of each man who owns a block of irrigation on the Nira. Experiments are now being made with the advice of the Agricultural Department in an improved method of sugarcane cultivation, by which it is hoped that the area of cultivation may be extended considerably without a greater expenditure of water. The block leases will terminate in 1917, and careful surveys are in progress for the selection of a set of permanent block areas on which all the necessary improvements will have to be carried out as a condition for guaranteeing the supply of water for a long term of years.

121. In connection with waterlogging a remedy was sought in the curtailment of canal irrigation to 10 months on certain lands and the use of pumps or lifts for the remaining 2 months. This experiment has so far proved a failure because of the very heavy expense of raising water even with short lifts; the cultivators owning sugarcane would willingly pay an extra Rs. 30 an acre for the two months for flow water. An additional objection was that in some cases this subsoil supply was found to be brackish and unsuitable for irrigation. As a means of reducing the water level in the waterlogged soil this pumping has also proved a failure where it was most wanted, namely in retentive soils, because of the steepness of the cone of depletion. This means that the water level would by pumping be rapidly reduced in the well, but be not much affected in the surrounding area at a short distance from the well.

122. The distributaries on this canal system are now being gradually remodelled, and efforts are being made to control the supply in places by some simple form of measurement with Cippoletti weirs and adjustable outlets.

123. The area irrigated, though not approaching the previous year's high figure, was very satisfactory being 54,133 acres, yielding a gross revenue of Rs. 5,26,536, which is over 8 per cent. of the capital cost. It has been found that the working expenses of this canal have been cut down beyond the economical limit, resulting in considerable deterioration of the minor channels. As the proportion of sugarcane is so high, the rate of maintenance per acre of irrigation should approximate more to Rs. 3 than Rs. 2 for efficient management, and this would represent about 2½ per cent. on the capital cost.

Mhaswad Tank Canals, Girna Left Bank Canal.

124. Of the other protective works in operation the Mhaswad Tank Canals in the Sholápur District, yielded for 6,342 acres of irrigation a gross revenue of less than Rs. 5 per acre and less than 1½ per cent. on its capital expenditure. The canals are about 30 years old.

125. The Girna Canal in Násik is a new irrigation work and is developing slowly. The storage work is at Chankapur.

Productive Works.

Mutha Canals.

126. This is the only important Major Productive work. It lies in the Poona District including under a total cost of 77 lákhs rupees, the expenditure on the Poona Water supply, and yielded this year a total gross revenue of nearly 5 per cent. The area this year was 12,298 acres which is less than the average.

127. It is proposed to free this canal system from the Poona Water Supply, the charges and receipts of which at present form part of the canal accounts. The canal will supply the water as heretofore at the pumping station, and the Poona Water Supply will be debited with a charge for the quantity of water taken. Control will remain with Government as very important purification works are now being undertaken and the distribution has to be made to all classes of the population including the military.

Other works.

128. In connection with the other Major and Minor Works it may be said that the year was an average one. There are no important facts or problems to be reported regarding any of these little works.

(b) WORKS UNDER CONSTRUCTION.

Godavari Canal Project.

129. The main object of the Godavari and Pravara Schemes is to bring under irrigation the fertile lands in the Godavari and Pravara Valleys of the Ahmednagar District. These areas are often visited by famine or scarcity, and, without irrigation, afford but a precarious livelihood for the cultivators.

130. The Godavari scheme, which is the first of the new large protective irrigation projects, was estimated to cost Rs. 96 lákhs. Its reservoir (Lake Beale) is in the Igatpuri Táluka of the Násik District. It is formed by a long masonry dam on the Darna River opposite Aswali station on the G. I. P. Railway. The dam can be seen clearly from the railway. The lake can hold 8,818 million cubic feet of water, which is let down the river for 51 miles and then picked up at the Nandur Madmeshwar weir and passed into the right and left bank Godavari canals.

131. The damage done to the masonry at the large sluice openings which was referred to in last year's report was effectively remedied in May 1915. The damage did not cause any serious loss of water. As the canals are not yet quite completed and the irrigation is only in process of expanding, the water stored is for the present much in excess of requirements. The two canals combined can discharge 612 cubic feet per second and command 232,390 acres up to the borders of the Nizam's territory. To facilitate the discharge of water into the canals a small wall, 3 feet high, has been raised on the weir crest, which provides a head of 4 feet above the full supply level in the canals. It is hoped that the great trouble from weeds in these two canals will be somewhat reduced by the agency of this wall, after a sufficient amount of silt has been deposited on the shallow margin of the weir basin. At present clear water runs down, except during the monsoon, and the growth of the weeds is very rapid. If turbid water can be made to pass down, as happens in the Nira Left Bank Canal, the weeds will disappear and the discharging efficiency of these canals will be restored.

132. The seepage complained of so much at first is diminishing, and lands previously waterlogged are now dry. This is attributed to the staunching effect of fine silt entering during the monsoon.

133. The cultivators are being trained to carry out irrigation in an orderly manner, and there is no doubt that there will soon be a great demand for water, but the general complaint is want of capital for the purchase of agricultural implements, bullocks, manure, etc., required for cultivation of large areas of valuable crops under canal irrigation. The irrigated area this year was 17,100 acres, half what it was two years ago.

134. The construction of new roads in the irrigated area is in progress.

135. The expenditure on the Godavari Project was 3½ lákhs rupees.

Pravara Canals

136. Just to the south of the Godavari Canals lies the Pravara Canals Project. Its left bank canal commands a splendid tract of land between the Pravara and the Godavari rivers abutting against the tail command of the Godavari Right Bank Canal.

137. The storage is at Bhandardarra, south of the great Kalsubhai Hill. The dam is to be 260 feet high and the water from this reservoir will be let down the Pravara River for a distance of 53 miles and will then be picked up by the weir at Ojhar and enter the Pravara Right and Left Bank Canals. The whole project is to cost 81 lákhs of rupees, but a revised estimate is under preparation partly to provide for excesses in construction, and partly for the proposed increased height of the dam, which will give a larger storage.

138. The masonry of the dam was raised 20 feet during the year and it is now 90 feet above river bed. The monsoon flood water is still being allowed to flow over the structure, a testimony to the excellence of the mortar used.

139. The raising of the pick-up-weir at Ojhar and the reconstruction of the left bank head regulator will be completed next year.

140. The combined discharge of the two canals is 683 cusecs, and their command 228,720 acres; so the Godavari and Pravara Projects are almost of equal size. The latter has the advantage of a greater storage, but the former has, with the Godavari and Kadwa rivers, a much larger catchment area from which it draws its supplies. A special feature of the Pravara project is the exceptionally good gardens and nurseries established in the bungalow compounds by the Executive Engineer and it is hoped that the gardens will eventually prove financially profitable. Much attention is being paid to the plantation of trees along the canals. The expenditure on the Pravara Canals was 6½ lákhs of rupees.

Nira Right Bank Canal—Lake Whiting Dam.

141. Extensive preparations have been made for the construction of a new dam, a mile long and 160 feet high, to replace the present graceful structure, 100 feet high, designed and built by Mr. J. E. Whiting, M.A., M.I.C.E. The original intention was to build the new dam over the existing one, but that proposal has been abandoned for various reasons and an entirely new dam is to be constructed, at a safe distance from the old one. A length of 1,750 feet of the excavation has been finally passed for foundations, another 1,380 feet will soon be ready, while in 1,200 feet of the river portion the presence of red rock is proving troublesome but sound rock is available below it. About 1,000 feet length of the new dam lies inside the existing tank and work can only be done there during half of the year.

142. The red rock found in the river, though used for foundations in parts of the existing dam, is not strong enough for the pressures in the deepest part of the new high dam, hence the foundations must be taken down below this material in the river portion.

143. The irrigation water is being carried over the new foundation trench by means of a steel pipe 5½ feet diameter supported on masonry pillars and connected to three 30 inch sluices laid in the old dam. The 15 large undersluices of the old dam, each $4' \times 8'$ in size, the purpose of which was to keep the tank clear from silt by the discharge of the first floods of the monsoon, cannot be used again until the new dam has been founded and brought up above ground level in the river portion.

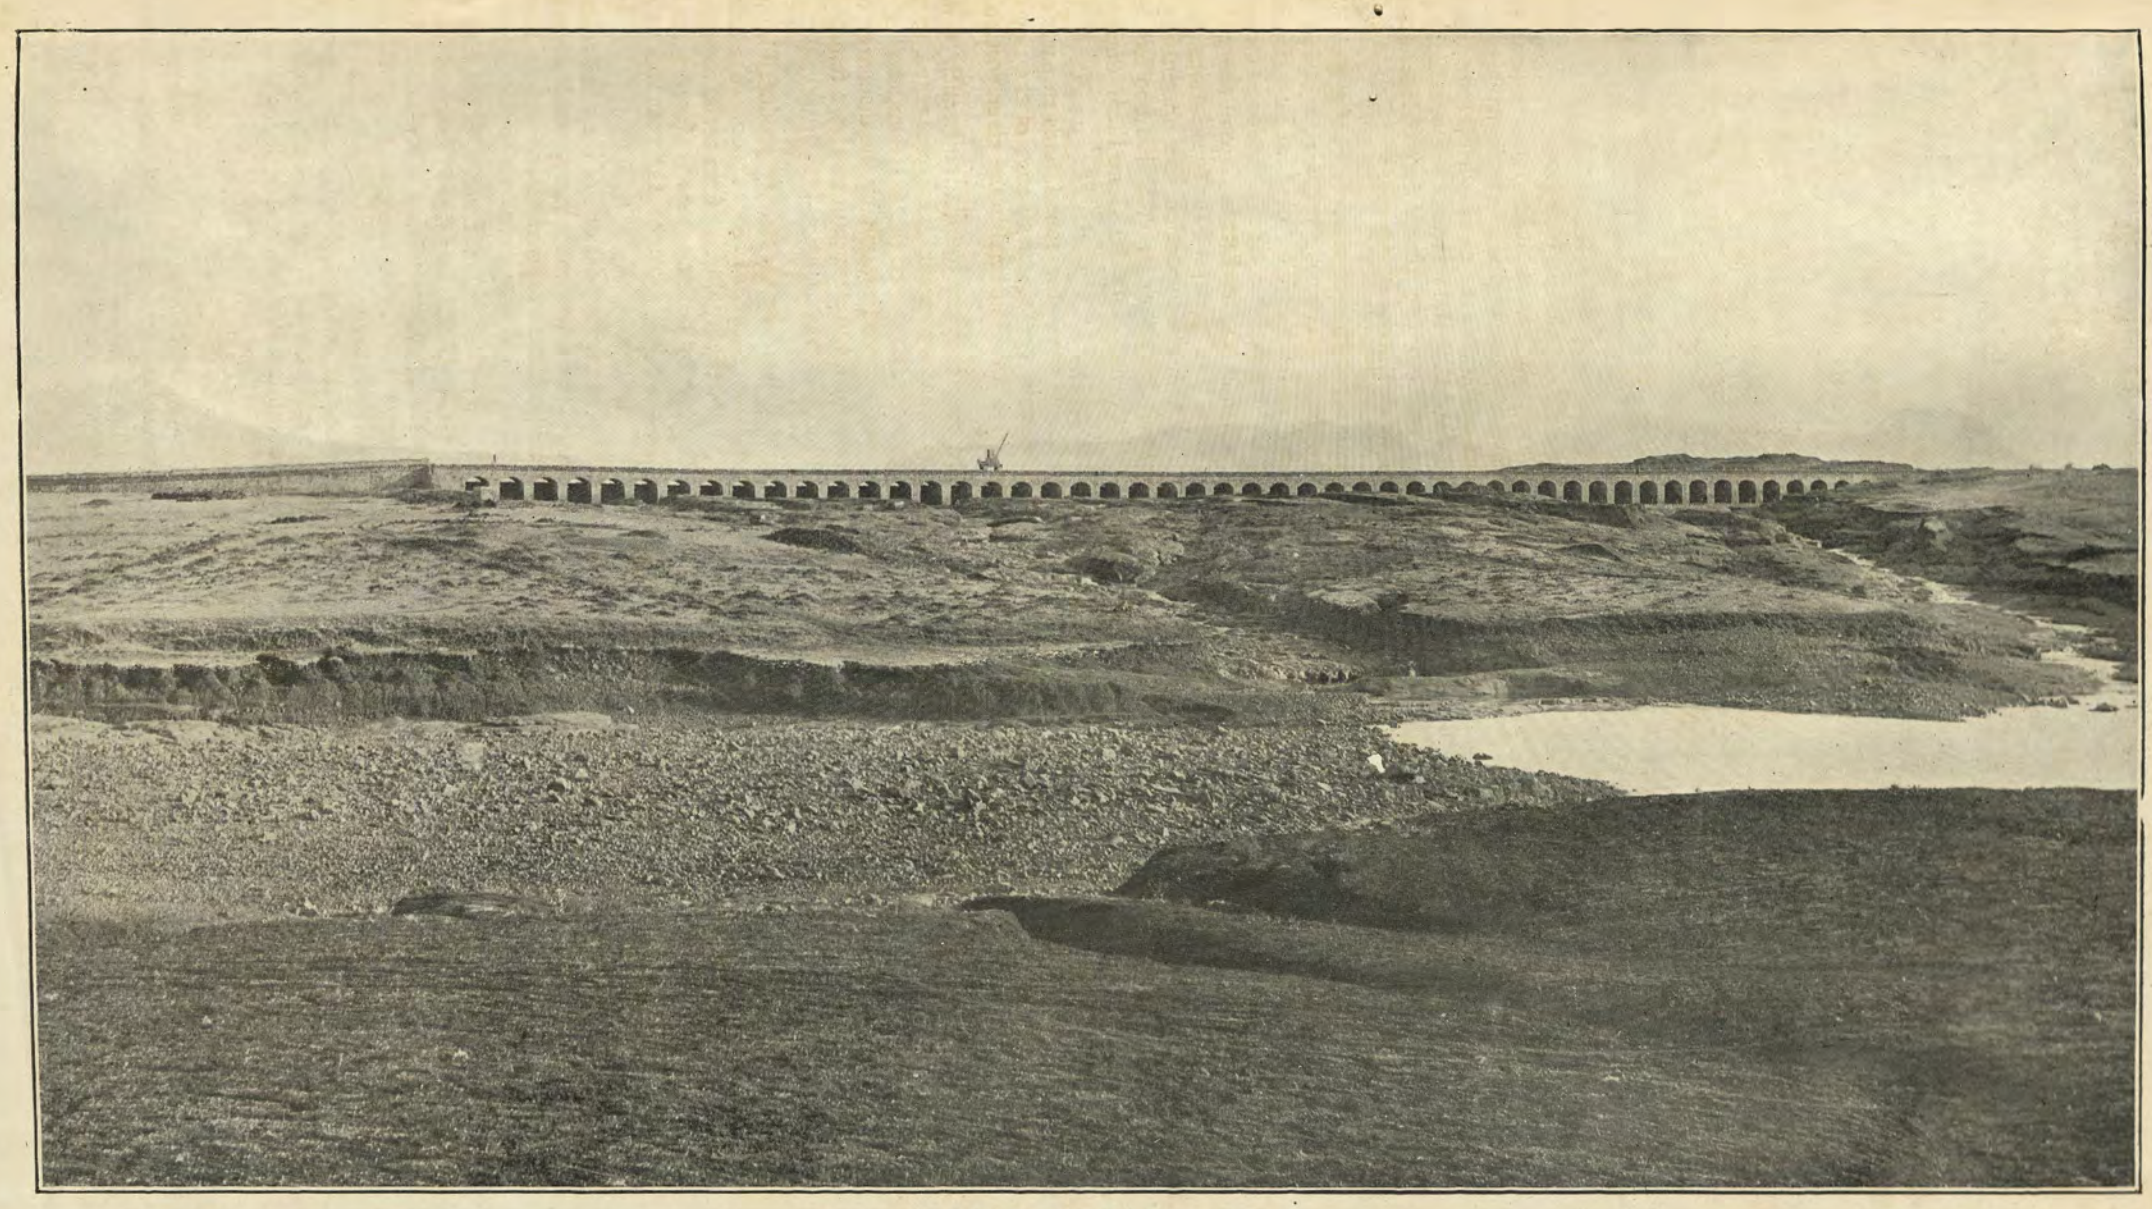
144. The machinery on the works is to be driven by electricity produced by water power from the existing dam. The preparation of this plant has been somewhat retarded by the war in Europe. The war has also prevented the adoption of an aerial ropeway for the transport of lime and this work will therefore be done by bullock carts. Masonry has been commenced on a short length of the dam. The expenditure of the year was 12 lákhs of rupees.

145. About 3½ lákhs of rupees has been spent on foundations of the dam, otherwise the expenditure of about 17 lákhs of rupees up to date is for machinery, water-supply, all kinds of buildings, kilns and lime supply, communications and materials at site. The cost of the whole dam will be about 100 lákhs of rupees.

Canal.

146. While the construction of the Bhatghar dam is in charge of one Executive Engineer with the usual staff, the Nira Right Bank Canal has been entrusted to two separate Executive Engineers who spent over 18 lákhs of rupees during the year, continuing the excavation and heavy embankments on this large work. A large number of masonry works were commenced. The experience of the last three years has shown that a revised estimate is necessary and the probable excess, which is considerable, is due among other reasons to the rise in cost of labour, the scarcity of water and fodder in the Sholápur tract and the insufficient provision made originally for obtaining suitable materials for the embankment from long leads.

147. There will also be a considerable excess on the dam partly due to the change of design, which provides for a new structure entirely separate from the old one, and partly due to a rise in the rate of labour and for other reasons. The work has been carefully inspected by an experienced contractor of considerable standing in India and he has expressed his inability to compete with the rates at which Government propose to carry out the whole work.



LAKE BEALE DAM

Waste weir at west end of Dam.

LAKE BEALE DAM

Constructed
February 1907—March 1914

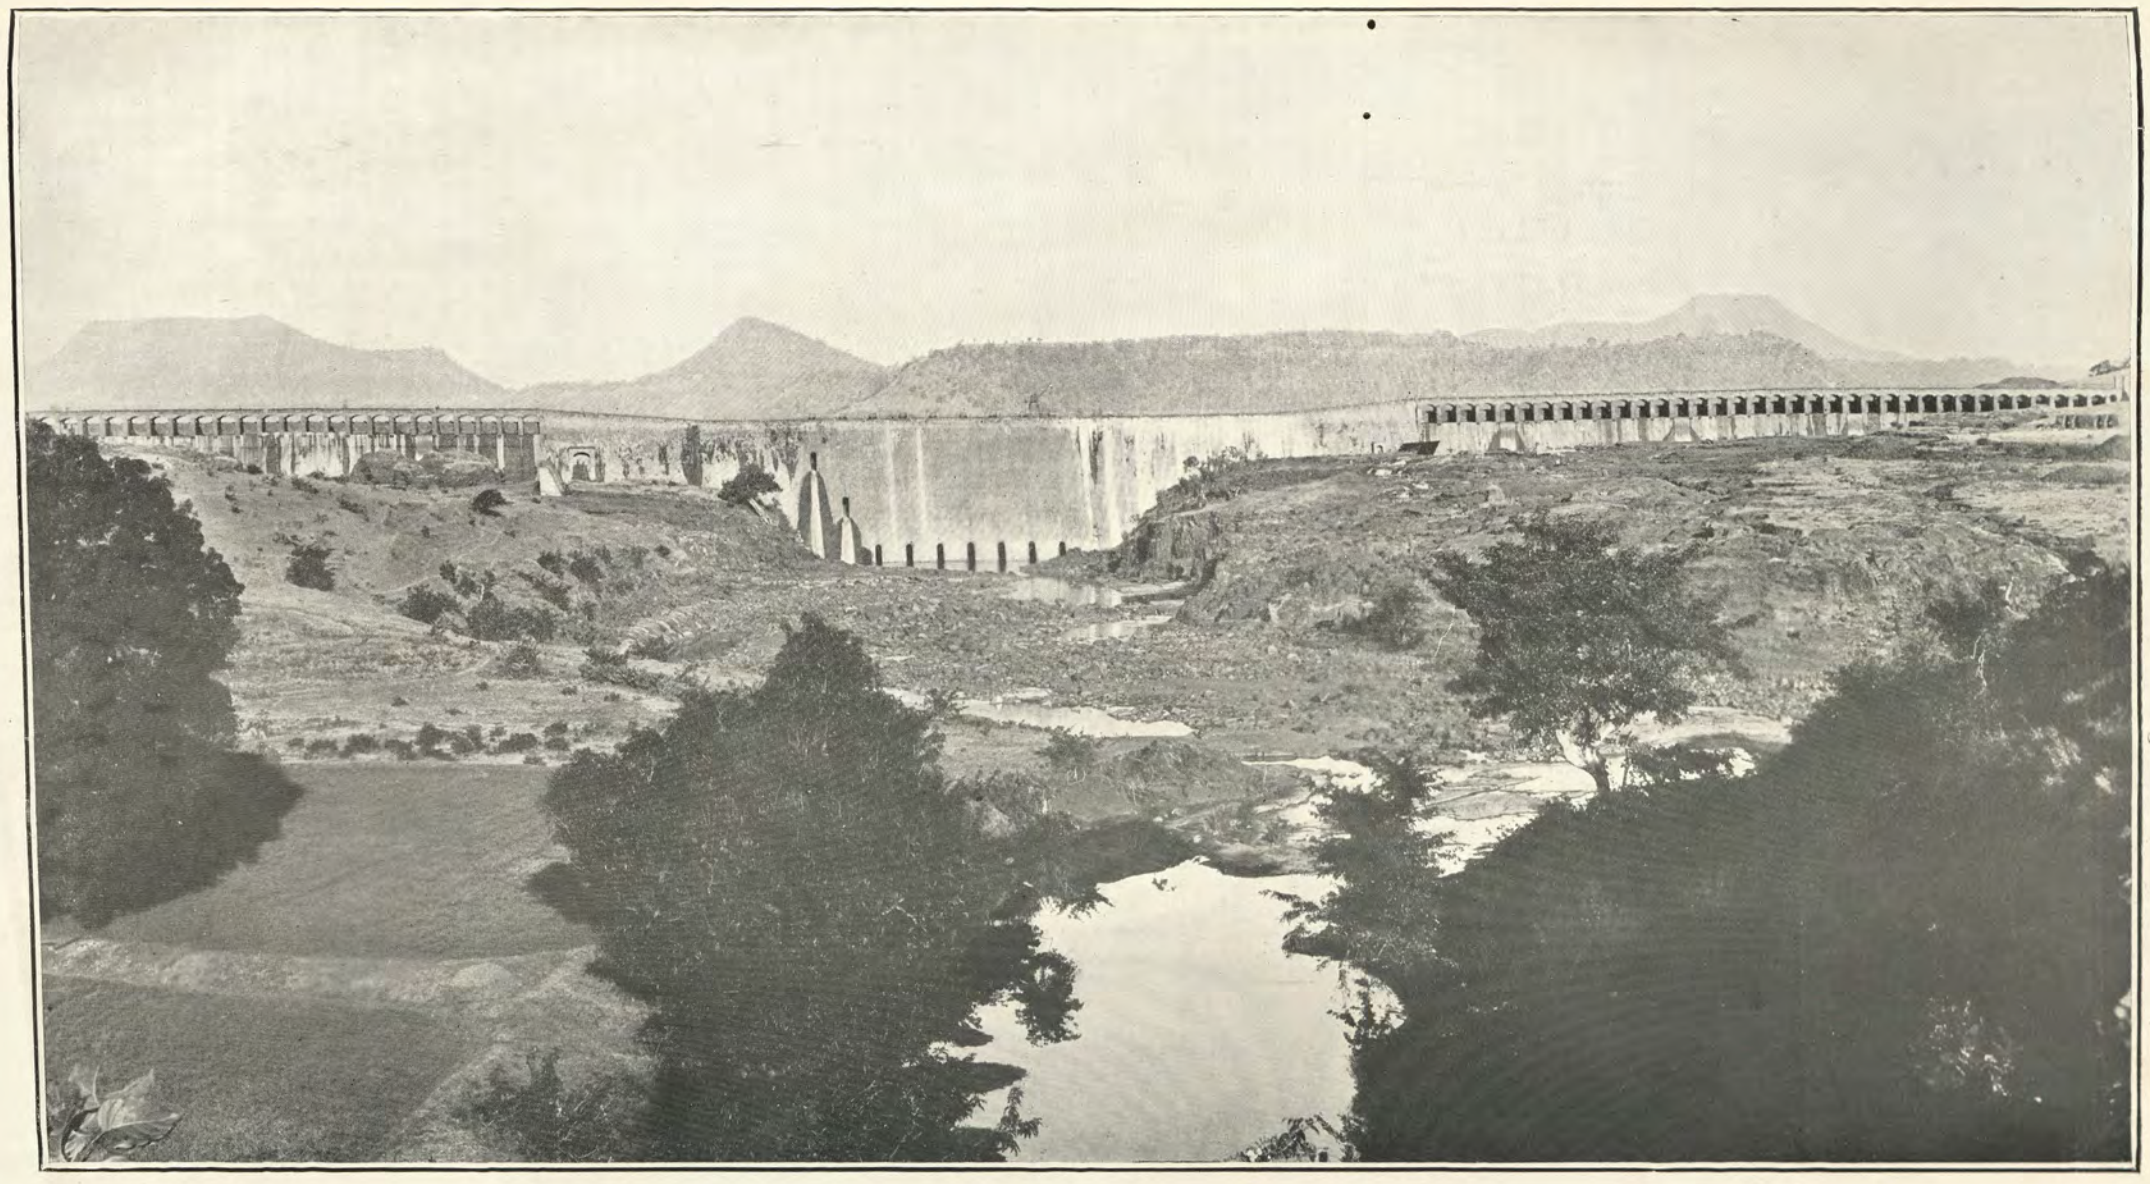
East end and centre portion of Dam.
Stores 8,819 million cubic feet of water.

Length 5,450 feet.
Height above founds 91·6 feet.

LAKE ARTHUR HILL DAM.

Full view of the Dam, 85 feet high.

(Taken from the Left Bank.)



CHANKAPUR DAM.

148. This is a small work to which water is supplied from the Chankapur tank. The extension, carrying about 40 cusecs only, will take the canal as far as Malegaon. The work is under construction. Girna Left Bank Canal Extension.

(ii) Second Class Irrigation Works.

149. On repairs, extensions and improvements to the bandharas and small village channels, situated in Násik and Ahmednagar Irrigation District, a sum of Rs. 16,823 was spent.

4.—Southern Division.

150. In the Southern Division there was a considerable decrease in the area of irrigation, mainly under the Krishna Canal, Sátára District, and the Gokák Canal, Belgaum District, because of the seasonable rainfall.

151. The Major and Minor Works of the first class irrigated nearly 21,000 acres of land, while the very numerous second class works, for which no capital accounts are kept, irrigated 73,000 acres or little below the average.

(i) First Class Irrigation Works.

152. The only Major Irrigation Work is a small weir with canal system on the Krishna near Karád, on which about 1,500 acres of sugarcane is grown. It irrigated only 3,600 acres of land yielding a gross revenue of Rs. 51,700 about 5½ per cent. on its capital cost. The project for raising the water level at the weir by moveable shutters has not yet been fully carried out, the strengthening masonry was constructed last year, and the shutters are under construction. Krishna Canal.

153. All the first class Minor Works in this Division are small; the most important of them is the Gokák Canal. This system consists of a masonry weir across the Ghataprabha river at Dhupdal which supplies water to the Gokák Mills and also to a short canal. The area irrigated was only 6,500 acres and the gross revenue assessed at Rs. 30,600 was only a trifle over 2 per cent. on the capital cost. Gokák Canal.

154. As the river supply failed earlier than usual the Gokák Mills supply had to be curtailed between 7th February and 2nd May 1914, an unusually long period, and a rebate of Rs. 1,683 was granted to the Company.

155. In the last year's report an error was made in describing the flood as a heavy one; the discharge was 54,000 cubic feet per second and stood only 2·74 feet on the weir crest. This year, however, witnessed the greatest flood on record, when on 6th August a discharge of 218,500 cusecs was measured giving a run-off from the 1,080 square miles catchment, of 0·314 inch per hour. This flood was 7·5 feet deep on the crest of the weir, and remained so for 3½ hours.

156. The Gokák Canal Extension Scheme has been sanctioned by the Secretary of State. It will cost close on Rs. 200 lákhs and commands 500,000 acres nearly half of which is in Native States. Orders for commencing this work have not yet issued.

157. The only other two works taking off direct from rivers without storage are both in the Sátára District, the Revari and Chikhli Canals, irrigating 1,200 and 400 acres respectively. Revari and Chikhl Canals.

158. Of canals furnished with storage works the three most important are in the Sátára District. The Yerla River Works irrigated over 4,000 acres of land yielding a gross revenue of Rs. 18,300. Work was continued on the repairs to the Nehr tank dam a portion of which slipped in 1913. The waste weir crest has still been kept 3 feet below its proper level. Yerla River Irrigation Works. Nehr Tank.

159. The Maini Tank irrigated 1,800 acres with an assessed revenue of Rs. 7,200. Maini Tank.

160. The third system referred to is the Upper Mán River Works with the Pingli Tank as storage. This system irrigated about 1,000 acres yielding a revenue of Rs. 4,000. The large Mhaswad Tank, a protective work already referred to, is situated lower down on the Mán River. Upper Mán River Works.

161. The remaining works are all small tanks mostly in the Dhárwár District. They irrigate from 100 to 700 acres each and did as well as usual. Other Works.

(ii) Second Class Irrigation Works.

162. These small but numerous works are mostly in the Dhárwár District and on them depends the success of the important rice cultivation. During the year repairs to 89 tanks were carried out and the expenditure on them amounted to Rs. 57,400, compared with the previous average of 1,06,700 rupees.

163. These special repairs generally consist of strengthening the earthen dams, making proper waste weirs and putting in efficient pipe and masonry outlets. The efficiency of the tanks is thus maintained or increased.

Dharma Canal.

164. The work of improving the Dharma Canal system was commenced in January 1910; about 12,000 rupees still remain to be spent on this small work, which has a good area of irrigation.

5.—Scientific Work.

(a) River Gauging.

165. An extensive system of rain and river gauging was introduced on the recommendation of the Indian Irrigation Commission. The results of the river gauging are shown in a publication called the Annual Report of Supplies of Water available for Irrigation Works. The work is very difficult to carry out satisfactorily, and a class has been opened in Poona where practical instructions and demonstrations were given to the gauge karkuns as a training before they commence their annual operations.

166. The work has now been made into a sub-divisional charge, and a junior Executive Engineer has taken up the duties of supervision, training and calculation.

(b) Experiments on the efficiency of Canals.

167. Another annual publication gives a record of observations for the flow and losses in canal, the quantity of water used for irrigation, and the loss from tanks.

168. Occasional notes are written upon the saturation of earthen dams and the rate of deposit of silt in tank basins for which observations are being made continuously.

*Not calculated in respect of Works for which only Revenue Accounts are kept.

N.B.—This account has been prepared in accordance with the instructions contained in Government of India's No. 686-C.W.I., dated 10th June 1901, communicated in Government Resolution No. A. I.—1453, dated 12th July 1901.

ERRATUM.

Note.—The figures of average discharges of the Godavari Right Bank Canal at head and utilized, printed in columns 10, 11, 12 and 13 of Statement I-E in the Administration Report of Irrigation Works for the year 1912-13, were incorrect and consequently the figures of duty in columns 14 to 17 were also incorrect. The following figures may therefore be substituted for them :—

Average discharge cubic feet per second.				Area irrigated per cubic foot per second.

/ A This area is also commanded by the Nira Canal.
* The catchment area of the drainage channel is 13 square miles in addition.
† At provisional F. S. L.
‡ At original F. S. L.
§ Revised by fresh calculations from contour areas.
‖ Revised as per completion report under salient points.
¶ Revised per last para accompaniments to G. R. No.—W.I. 1730 of 6th August 1910.
(a) Figures given in Statement I-A.
(b) Above lowest foundations.
(c) Above lowest point in river bed.
(d) The tank supplies the Girna Left Bank Canal and bandharas below the tank.
(f) Includes 38½ miles of branch canals.
(g) The tank supplies the Pálkhed, Ojhar Támbat, Wadáli Canals and their distributaries as noted in Statement I-A.
(h) Storage available after deducting 508 m. cft. which cannot be used on account of the Poona water-supply.
(i) Includes 7·133 commanded by Matoba Tank.
(j) After deducting silt deposits.

II-A.

Bombay Presidency, excluding Sind, for 1914-1915.

(a) Work under construction. The work is entered here to show the write back of the miscellaneous receipts and expenditure for the previous year's erroneous classification.

(b) No percentage is calculated, as the net revenue against the work is a minus figure.

D. DEWAR,
Accountant General, Bombay.

I-E.

Bombay Presidency, excluding Sind, during the year 1914-1915.

Area irrigated per Cubic Foot per Second.				Base to which the Duties of Water are calculated.		Remarks.
Discharged at Head.		Utilized.				
Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.	
14	15	16	17	18	19	20
21·97	103·06	39·09	119·24	16th June to 15th October	16th October to 15th February	(a) A fair duty considering the scattered nature of irrigation and uncertain supply in the canal.
56·41	79·59	56·41	79·59			(b) The low duty is due to the very scattered nature of irrigation and to the fact that irrigation is not yet fully developed.
18·92	70·80	20·96	70·70			
...	...	...	...			(c) In the case of Nira Canal and Shetphal Tank and the Bhádalwádi Tank, where there is a block irrigation, the actual areas of perennial and 8 months' crops under irrigation in the rabi season are added to the areas under rabi for calculating rabi duties.
8·68	50·25	8·68	50·25	16th February to 15th October.	16th October to 15th February.	
155	176	179	176			
85	127	98	127			
264	179	264	179			
155	127	155	127			
...	97·25	...	97·25			
...	...	...	...			(d) The low duties due to unsatisfactory alignment of the Lakh Canal and its distributaries.
47·53	59·61	48·75	59·61	15th June to 14th October	15th October to 14th February.	(e) Not available, water being allowed to flow in the Mátoba Tank.
76·83	12·87	88·56	13·93			(f) The Tanks are worked only in monsoon and rabi seasons.
Not known.	553	Not known.	553	15th June to 14th October ...	15th October to 14th February.	*Note.*—The duties for kharif and rabi seasons are generally obtained by dividing the figures in columns 3 and 4 by the corresponding figures in columns 10 to 13: but where the block and lease system is in vogue the information thus obtained is not correct, as the area is nearly all included in the kharif season.
...	...	...	...	16th June to 15th October	16th October to 15th February.	
43·04	83·80	43·04	83·80			
175·00	133·33	175·00	133·33			
53·25	133·01	53·25	53·25			
8·48	40·68	8·48	40·68			
§58	§53	(e)	(e)	16th February to 15th October.	16th October to 15th February.	On the Nira Cana and Shetphal tank the block type figures of irrigation represent the actual area under irrigation reduced to a rabi basis, *viz.*:—
353	213	353	213			1 acre sugarcane = 3 acres bhusar crops.
34·53	45·70	37·56	48·59	15th February to 14th October.	15th October to 14th February.	1 acre other perennial = 2 acres bhusar crops.
59·33	13·75	59·33	13·75	16th February to 15th October.	16th October to 15th February.	1 acre 8 months crops = 1½ acres bhusar crops.
...	...	...	...			1 acre single watering = ⅓ acre bhusar crops.
...	...	...	...			and the corresponding duties are shown in columns 14 to 17 in block type.
M.c.ft. 19·91	M.c.ft. 1·16	M.c.ft. 19·91	M.c.ft. 1·16	15th June to 14th October	15th October to 14th February.	§The duties are low because of high proportion of perennial crops to total cultivation.
...	...	...	...			* Area under consolidated assessment.

Note.—The difference between the figures of total areas and assessments in this statement and those in Statements I—E to IV—E is due to difference in treatment of fractions in some cases, and in others to the fact that the figures in this statement are more or less hypothetical and are arrived at on the assumption that certain areas are assessed at certain rates.

* Rs. 1,377 in kharif and Rs. 9 in rabi have had to be remitted partly on account of the mistakes made in measuring and partly owing to the failure of the crops on account of flooding or deficiency of supply.

§ Rs. 287 and Re. 1 had to be remitted in the kharif season on the Wangroli and Sahiat Tanks respectively.

† Exclusive of 1,814 acres of Mamul Bágáyat area on the Lower Pánjhra River Works.

‡ Exclusive of Rs. 8,352 on account of enhanced water-rate on old works of the Lower Pánjhra River Works.
